Center Hung with Pivot Point Moved

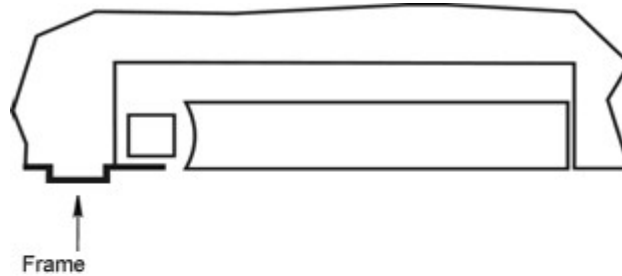

- Pivot point centered in thickness of the door
- Pivot point can be moved closer toward the lock edge of the door.
- Used on Cased Opening Frames
- Single acting or Double acting
- When single acting pivots or closers are used, there must be a frame or angle stop at the lock edge of the door.
- Depending on the location of the frame, doors with standard edge-of-door installations can rarely swing more than 130°.
- Cannot be used on fire rated doors
- Center hung closers are not recommended on residences.

Pivot Types

[Offset Hung](#) · [Center Hung](#) · **[Pocket Pivot](#)**

Pocket Pivot

- Pivot point is located in the frame.
- Pocket pivots can only swing 90°.
- Doors open into and sit in a pocket in the wall.
- Primarily used for fire rated, cross-corridor doors
